Apros

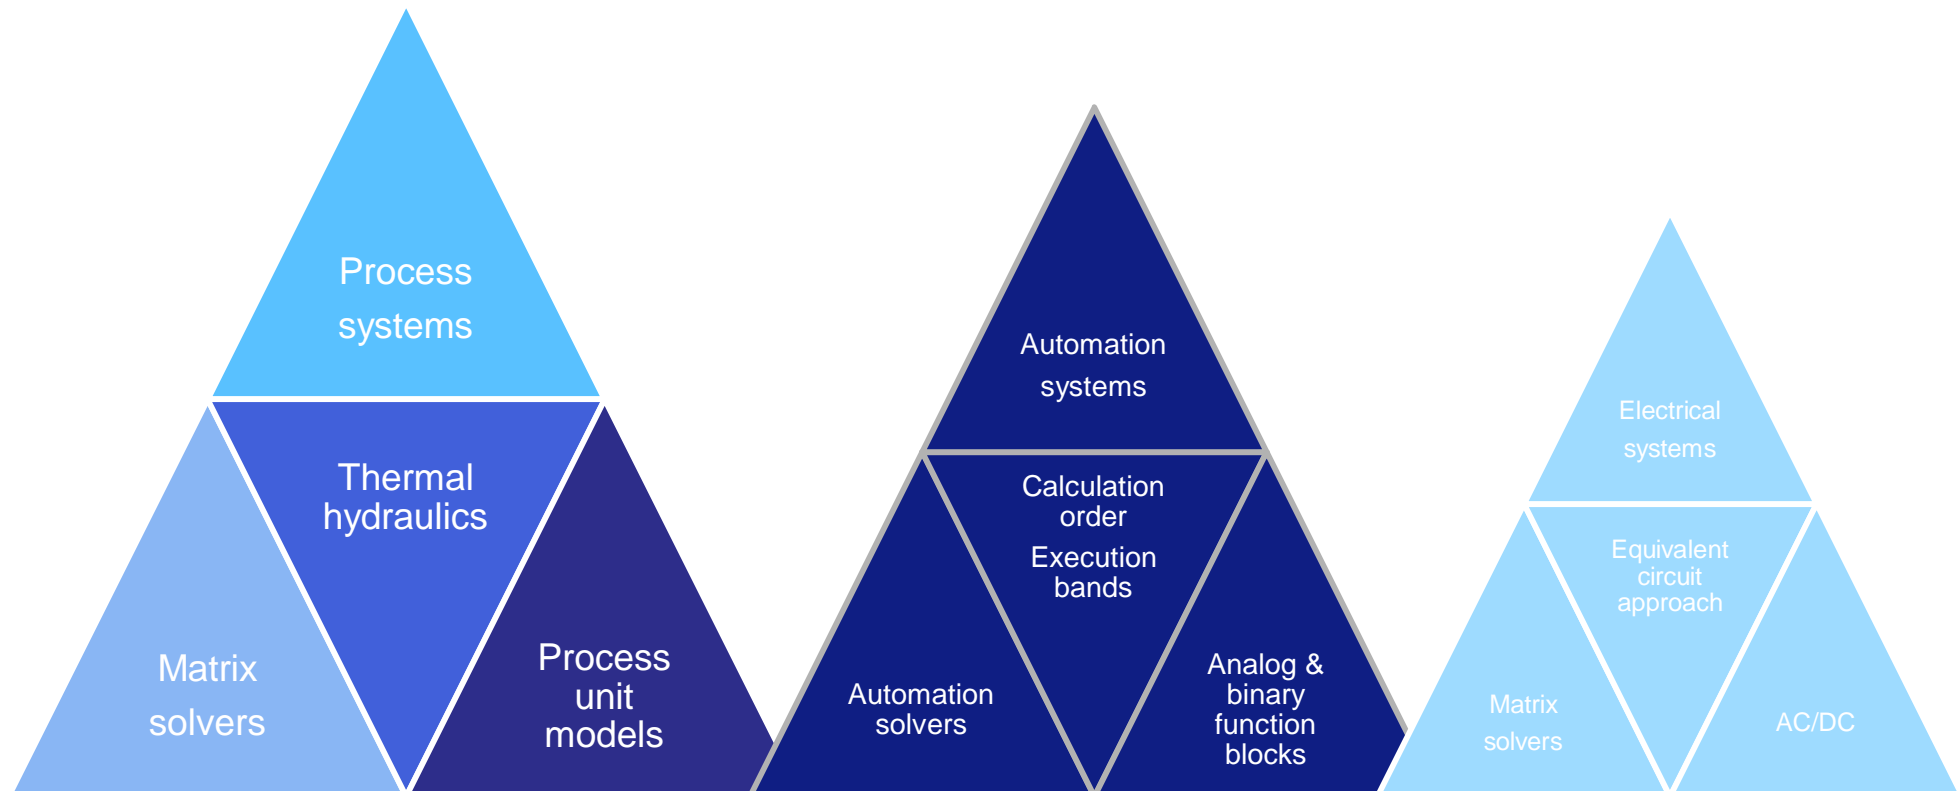

Apros - Advanced Process Simulator

- § Apros (www.apros.fi) is a software for 1D modelling and dynamic simulation of industrial processes, including automation and electrical systems
- § Developed since 1986 by Fortum and VTT
- § Offers **combined fidelity and comprehensiveness**

Main domains in Apros modelling & simulation

Various uses of Apro simulation

R&D

Evaluation of
new process
concepts

Integrated Process
& Control design

Development of
new control strategies

Engineering

Safety analysis

Automation
testing

Control room
design
evaluation

Automation
engineering

Operation

Performance
analysis

Operator
training

Trouble-
shooting

Optimisation

Simantics

Plug-in architecture for modelling and simulation

For more information, visit: www.simantics.org

Simantics focus areas

flexibility, connectivity and maintainability

Flexibility, connectivity

**Co-use of different
simulators and
expandability of the
computation**

**Simulation and control
system integration**

**Simulation and
design systems (CAD)
integration**

**Team features and
simulation information
management**

Maintainability

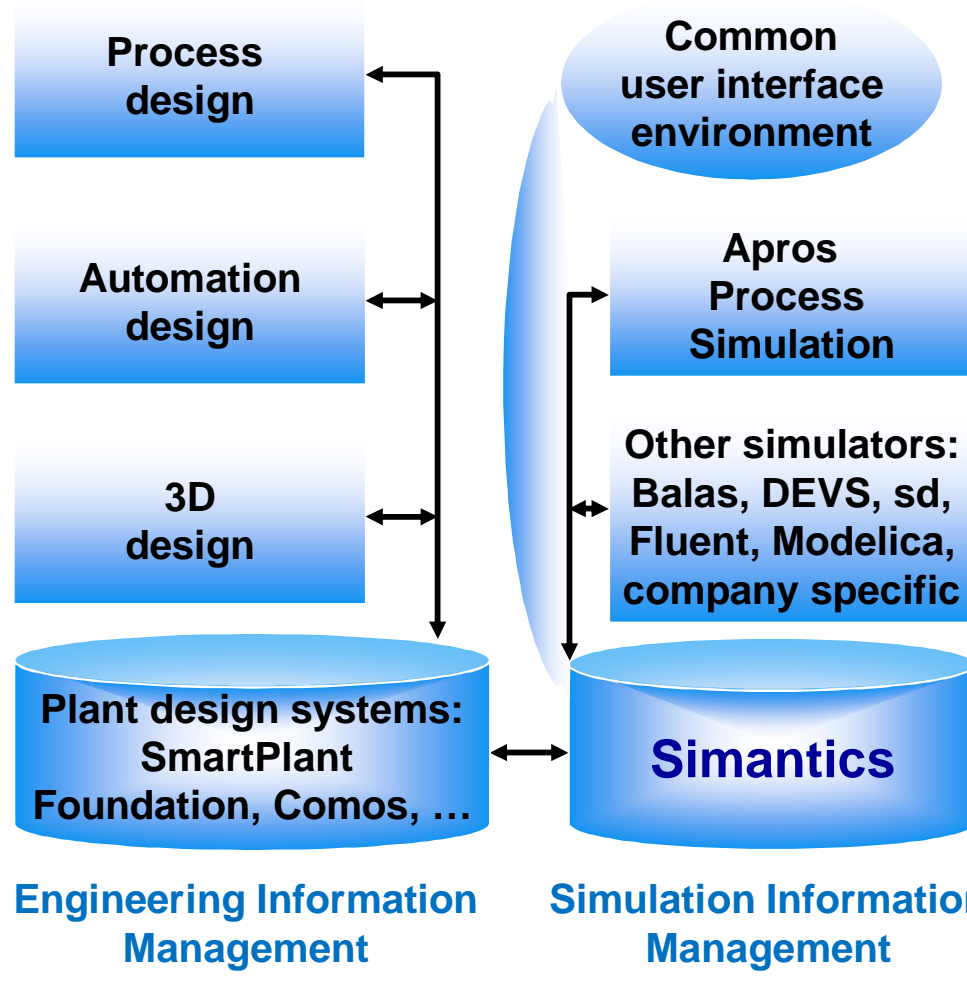

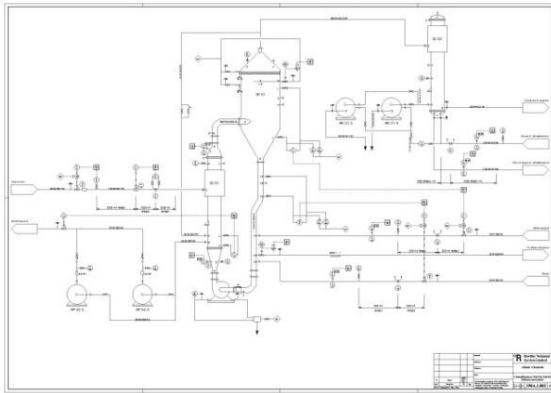

Process simulation

Simulation and process design integration
